

COMPARING VR SERVICES RATE BETWEEN BLACK AND WHITE JOB SEEKERS ACROSS THE US

By Alberto Migliore and John Shepard

Data Source: Rehabilitation Services Administration (RSA-911, Program Year 2021: July 1, 2021 to June 30, 2022).

People who apply for Vocational Rehabilitation (VR) services typically experience one of three outcomes:

- 1) they receive services and then get a job
- 2) they receive services and don't get a job
- 3) they do not receive any services

It is important to document the percentage of people who receive services, because receiving services is a key step toward securing employment.

[For more, see DataNote 75.](#)

In this data note, we explore differences in receiving VR services between Black job seekers and white job seekers.

We found that 85% of white job seekers who exited a VR program in 2022 received services. Comparably, 84% of Black job seekers who exited VR in 2022 received services. However, the discrepancy between Black and white job seekers was larger at the state level.

As Table 1 shows, a higher percentage of white job seekers received VR services than Black job seekers in 27 states. For 10 states, this difference was over 5% and up to 18% in Nebraska. In contrast, only two states reported more than 5% of Black job seekers who received services compared to white job seekers, including Tennessee, and Arizona.
